

## ABSTRAK

### GAMBARAN FAKTOR YANG MEMPENGARUHI KEPATUHAN CUCI TANGAN PADA TENAGA KERJA DI PUSKESMAS SUNGAI RAYA KANDANGAN BULAN APRIL TAHUN 2022

Muhammad Risalman

Nurul Amalia, Putri Kartika Sari

Kepatuhan cuci tangan pada tenaga kerja di Puskesmas merupakan faktor yang berpengaruh besar dalam pencegahan terhadap terjadinya infeksi pada puskesmas tersebut. Terutama tenaga kerja kesehatan yang berinteraksi langsung dengan pasien memiliki potensi menyebabkan terjadinya penyebaran infeksi. Tujuan penelitian ini untuk mengetahui tingkat kepatuhan mencuci tangan tenaga kerja yang ada di puskesmas berdasarkan pengetahuan, profesi, dan tingkat pendidikan. Metode penelitian bersifat *survey deskriptif* dengan rancangan *cross sectional*. Hasil penelitian dari 27 responden yang mengisi kuesioner pada 08-09 april 2022 menunjukkan bahwa, tingkat kepatuhan berdasarkan pengetahuan sebesar (100%). Tingkat kepatuhan berdasarkan pendidikan dengan kategori SMA/SMK (7,4%), D3 (51,9%) dan D4/S1 (40,7%). Tingkat kepatuhan cuci tangan berdasarkan profesi yaitu Dokter (3.7%), Bidan (14.8%), Perawat (22.2%), Perawat gigi (7.4%), Apoteker (3.7%), Petugas laboratorium (7.4%), Tenaga kesehatan lingkungan (11.1%), Tenaga kesehatan masyarakat (11.1%), Petugas gizi (3.7%), Rekam medik (3.7%), Administrasi umum (7.4%), dan Sopir (3.7%). Sehingga, tingkat kepatuhan mencuci tangan tenaga kerja yang ada di Puskesmas sebesar (100%). Disimpulkan bahwa tingkat kepatuhan mencuci tangan tenaga kerja yang ada di Puskesmas adalah baik.

## ABSTRACT

### DESCRIPTION OF FACTORS AFFECTING HAND WASHING COMPLIANCE ON WORKERS AT SUNGAI RAYA KANDANGAN PUSKESMAS IN APRIL 2022

Muhammad Risalman

Nurul Amalia, Putri Kartika Sari

Compliance with hand washing for workers at the Puskesmas is a factor that has a major influence in preventing infection at the puskesmas. Health care workers, in especially, who have direct contact with patients, have the potential to spread infection. The aim of this study was to determine the level of hand washing compliance between health center workers based on knowledge, profession, and level of education. The research method is a *descriptive survey* with a *cross sectional* design. The results of the study from 27 respondents who filled out the questionnaire on 08th and 09th April 2022 showed that the level of knowledge-based compliance was (100%). According to education, SMA/SMK (7.4%), D3 (51.9%), and D4/S1 have the highest levels of compliance (40.7%). Hand washing compliance by profession, including doctors (3.7%), midwives (14.8%), nurses (22.2%), dental nurses (7.4%), pharmacists (3.7%), laboratory workers (7.4%), environmental health workers (11.1%), public health workers (11.1%), nutrition officers (3.7%), medical records (3.7%), general administration (7.4%), and drivers (3.7%). As a result, workers in the Puskesmas are more likely to wash their hands (100%). It was concluded that the level of compliance with hand washing of workers in the Puskesmas was good.
